1. Solve and graph this inequality: $3 x>9$ $\square$

2. Solve and graph this inequality: $(-2)(x+3) \leq 14$

Translate into an Inequality, and then graph: All real numbers that are less than 8 3. and greater than -12.

4. The sum of the lengths of any two sides of a triangle is greater than the length of the third side. The perimeter of this triangle is greater than 23. Write a Compound Inequality that describes $x$, and then graph:

5. Solve and graph: $2|x+1|-3 \geq 3$

6. The average monthly temperature in a northern Canadian city is $\mathbf{1}$ degree Fahrenheit. The actual January temperature for that city ( $\mathbf{t}=$ actual temperature) is never more than 5 degrees Fahrenheit warmer or colder. Solve $|\mathbf{t}-1| \leq 5$ to find the range of temperatures. Graph the solution.

7. Graph this Inequality: $\mathbf{2 y - x} \geq \mathbf{- 1 2}$

8. What Inequality is graphed here?

9. Write and graph 2 equations to determine the 2 numbers that satisfies this statement: the sum of two numbers is $\mathbf{8}$ and their difference is 4.

10. I have six coins in my pocket. They are all either pennies of nickels. The change in my pocket totals 184. How many pennies and how many nickels do I have?
Hint: let $\mathbf{x}=$ number of nickels and $\mathbf{y}=$ number of pennies.

11. Solve using substitution: $2 x-8 y=4$ and $-2 x+y=17$ $\square$
12. Solve using Addition or Subtraction: $2 x-2 y=-16$ and $x-2 y=-7$

Write a system of equations to describe the situation below, solve using any method. A TV station executive is planning the new lineup for next season's shows. On Monday nights, there will be $\mathbf{6}$ sitcoms and 1 drama, for a total of $\mathbf{1 7 6}$ minutes of programming, not counting commercials. On Tuesday nights, she has scheduled 2 sitcoms and 2 dramas, for a total of 102 minutes of non-commercial programming. All sitcoms have the same length and all dramas have the same length. How long is each type of show?
14. Is $(3,1)$ a solution to this system of equations?

$$
x+2 y=4 \quad 15 x+18 y=14
$$

15. The shaded area shown here describes the solution set to what 3 linear inequalities?

16. Graph these Inequalities and shade in the solution:
$y>2 x-4$
$y \leq x+2$

17. Simplify these expressions
